This medical device company is developing a novel treatment for type 2 diabetes, a condition becoming increasingly common in the middle east. Their one-off procedure is minimally invasive and helps keep blood sugar levels in check.

Pioneers in genetic medicine designed to improve human life and advance agricultural practices, the Recombinetics team is responsible for much of the gene editing technology used around the world today.

A globally recognized innovator, Stemonix enables medicine to work the first time by accurately recreating a patient’s heart and brain tissues. This allows pharmaceutical treatments to be administered safely and effectively, eliminating trial-and-error prescribing.

Zipnosis is pushing the capabilities of traditional virtual medicine through their one-of-a-kind platform. More importantly, it has proven successful over a wide range of applications by some of the largest health systems in the US.
